WE ENERGO GMBH

Kosovo – 150MWp Solar farm

Project Overview

- The Kosovo 150 MW Solar PV Project is a strategically located renewable energy initiative, designed to meet Kosovo's rising electricity demand and support its energy transition.
- With all necessary permits secured and grid connection approved, the project is in its final pre-construction phase and ready for investment.

Key Project Highlights

- Installed Capacity: 150 MWp
- Expected Annual Generation: 240.000 MWh
- Yield Factor: 1.600 kWh per kW peak installed
- Grid Connection: Approved and secured 110kV transmission line
- Land & Permits: All required permits obtained (environmental, land-use, construction)
- Project Status: Advanced Development Stage – Ready for Construction

Financial Overview

- Total Project CAPEX: € 110 Mio
- OPEX per anno: € 1.53 Mio
- Revenue Potential: At a tariff of € 62/MWh, projected average annual revenue is: € 17.4 Mio
- Average annual Net Cash Flow: € 15.5 Mio
- IRR of Equity: 19%
- Payback Period of Equity: 5.5 years
- NPV (12% discount rate): € 19.2 Mio
- Levelized Cost of Energy (LCOE): €30/MWh

Market & Investment Potential

- Kosovo is actively working to diversify its energy mix and reduce dependency on coal.
  The project supports national goals for EU alignment and emissions reduction.
- The secured grid connection and full permitting package significantly reduce development risks and provide a clear path to execution.
  The PV project will provide long-term, low-cost renewable energy to the national grid.
