WE ENERGO GMBH

Drin 68,4 MW WIND FARM

Project Overview

- The Drin 68,4 MW Wind Farm is a strategically located renewable energy project in Albania, positioned to capitalize on the country's growing demand for clean energy.
- With all necessary permits secured and grid connection approved, the project is in its final pre-construction phase and ready for investment.

Key Project Highlights

- Installed Capacity: 68,4 MW
- Number of Turbines: 12 units (ENVISION, optional Nordex)
- Expected Annual Generation: 184,000 MWh
- Grid Connection: Approved and secured (154 kV transmission line)
- Land & Permits: All environmental, archaeological, and construction permits obtained
- Project Status: Advanced Development Stage -Final Steps before Ready-to-Build (RTB)

Financial Overview

- Total Project CAPEX: € 90 MM
- OPEX (Discounted): € 2 MM
- Revenue Potential:
- At a tariff start of € 75 /MWh
- Revenue annual average: € 15,3 MM
- Net Cash Flow annual average: € 13.3 MM
- IRR of Equity: 20%
- Payback Period of Equity: 5 years
- NPV (12% discount rate): € 19.2 Mio
- Levelized Cost of Energy (LCOE): €30/MWh

Market & Investment Potential

- Albania is rapidly expanding its renewable energy capacity to meet EU decarbonization targets and diversify its electricity mix.
- In 2023, Albania imported more than 35% of its electricity, highlighting the need for local renewable generation.
- The secured grid connection and obtained permits reduce investment risks and provide a clear path to project execution.
- The wind farm will contribute to grid stability and energy security in the region, supporting Albania's growing energy demand.
