

North Macedonia 30 MWp Solar

Project Overview

- The North Macedonia 30 MW Solar PV Project is a large-scale renewable energy development aimed at supporting the country's energy independence and decarbonization roadmap.
- With permits secured and grid access approved, the project is investment-ready and positioned for rapid deployment.

Key Project Highlights

- Installed Capacity: 30 MWp
- Expected Annual Generation: 50.000 MWh
- Yield Factor: 1.610 kWh per kW peak installed
- Grid Connection: Approved 110kV transmission line
- Land & Permits: All required permits obtained (environmental, land-use, construction)
- Project Status: Advanced Development Stage – Ready for Construction

Financial Overview

- Total Project CAPEX: € 26 Mio
- OPEX per anno: € 0,3 Mio
- Revenue Potential: € 66/MWh tariff generates average annual revenue of € 3.3 Mio
- Average annual Net Cash Flow: € 3 Mio
- IRR of Equity: 14%
- Payback Period of Equity: 6.8 years
- NPV (12% discount rate):
- Levelized Cost of Energy (LCOE): € 30/MWh

Market & Investment Potential

- North Macedonia is investing heavily in renewables to meet European climate goals and strengthen domestic energy production.
- The country's supportive regulatory framework and energy market reforms enhance project bankability.
- This project provides investors with a secure, fully permitted, high-yield infrastructure asset.
