WE ENERGO GMBH

Croatia 45 MWp Solar-Farm

Project Overview

- The Croatia 45 MW Solar PV Project is a mid-scale solar energy initiative, well-positioned to deliver clean power to the national grid.
- With permitting and grid access in place, the project is in its final pre-construction stage and ready for capital deployment.

Key Project Highlights

- Installed Capacity: 45 MWp
- Expected Annual Generation: 75.000 MWh
- Yield Factor: 1.625 kWh per kW peak installed
- Grid Connection: Approved and secured 35kV transmission line, all legal arrangements and payments done
- Land & Permits: Fully permitted
- Project Status: Pre-Construction Phase – Execution Ready

Financial Overview

- Total Project CAPEX: € 33,3 MM
- OPEX (discounted): € 5.3 MM
- Average annual revenue: €5.1 MM
- Average annual Net Cash Flow: € 4.4 MM
- IRR of Equity: 15%
- Payback Period of Equity: 4.5 years
- NPV (12% discount rate): € 2.1 MM
- Levelized Cost of Energy (LCOE): € 31/MWh

Market & Investment Potential

- Croatia's clean energy strategy includes aggressive solar expansion to reduce dependence on imports.
- This project aligns with national objectives and benefits from low development risk due to full permitting and grid connection.
  It offers reliable long-term returns in an improving regulatory environment.
